NUEVO: ZX-530EL3AG2 - Anti-Microbacteria

Deslizamiento antibacteriano.

Guía en las plantas de llenado de botellas

El nuevo material desarrollado para la industrias de la medicina y la alimentaria es el ZX-530EL3AG2. Debido a las crecientes exigencias sobre higiene, el material ZX-530EL3AG2 se implementó con efectos bacteriostáticos (inhibidor del crecimiento) y bactericidas (matar). ZX-530EL3AG2 fue desarrollado para permitir diezmar las bacterias vegetativas y esporas (*Bacillus atrophaeus*).

Por ejemplo, el 60% del germen de „*Candida parapsilosis*“ murió

después de 1,5 horas de contacto continuo con ZX-530EL3AG2.

Para no dejar que este efecto actuase sólo en la superficie con una expulsión posterior de micro sustancias antibacterianas, el ingrediente activo nanoestructural se encapsuló de manera homogénea incorporada en el material.

De esta manera, aseguramos en la superficie una liberación gradual, lenta y continua de la sustancia activa. Además, las propiedades tribológicas (fricción y desgaste) para su uso en zonas húmedas se han optimizado, aumentando la elongación a la rotura y la tensión de tracción en el límite elástico.

Campos de aplicación

Engranajes sometidos a grandes esfuerzos, cojinetes, tuercas de husillo, guías de cadena y varias piezas deslizantes y de desgaste en zonas con altos requisitos de higiene o directamente en contacto con los alimentos sin envasar, son ámbitos de uso del ZX-530EL3AG2.

ZX-530EL3AG2 es

- antimicrobiano
- universalmente aplicable
- extremadamente resistente al desgaste
- buen comportamiento de deslizamiento
- dúctil
- Muy resistente a los químicos

Ejemplo de uso

Guía de deslizamiento echa en ZX-530EL3AG2

Las guías utilizadas hasta ahora con una capa de tejido laminado con PTFE-fibra de carbono, no eran adecuadas en la aplicación, ya que los hilos se rompían apretando los tornillos. El problema se resuelve con una placa de metal moldeado por co-inyección e integrando una junta tórica durante el ensamblaje. Para fabricarlo, se

utilizó el material fuertemente antimicrobiano ZX-530EL3AG2. El tiempo de desarrollo, a partir de la formulación conceptual hasta el suministro del producto moldeado por inyección, fué de 8 semanas. El problema se ha resuelto, el producto se ha mejorado y los costos anteriores se han respetado.

Propiedades del Material

Properties		Symbol / Unit	Standard	Value	Properties		Symbol / Unit	Standard	Value
material code			internal Standard	087	volume resistivity	R_D	$\Omega \cdot \text{cm}$	IEC 93	
colour				beige	surface resistance	R_O	Ω	IEC 93	$>10\Omega$
density	ρ	kg/dm^3	ISO 1183	1,52	penetration resistance	E	kV/mm	IEC 243	23
compressive modulus	E_c	MPa	DIN EN ISO 604	2750	tracking resistance		V	IEC 112	
elastic limit	σ_{el}	MPa	internal Standard	50	dielectric constant (110Hz)		1	IEC 250	
compressive stress at yield	σ_Y	MPa	DIN EN ISO 604	n.v.	dissipation factor (110Hz)	$\tan\delta$	1	IEC 112	
compressive strength	σ_M	MPa	DIN EN ISO 604	n.v.	max. surface pressure $v=1\text{m}/\text{min}$	p_{zul}	N/mm^2		12,5
compressive stress at 3,5% strain	$\sigma_{3,5}$	MPa	DIN EN ISO 604	45	max. surface pressure $v=10\text{m}/\text{min}$	p_{zul}	N/mm^2		6,5
compressive strength (0,01 h)	σ_M	MPa	Werksnorm	55	max. surface pressure $v=100\text{m}/\text{min}$	p_{zul}	N/mm^2	internal test	0,4
compressive strength (100 h)	σ_M	MPa	Werksnorm	43	max. surface pressure $v=200\text{m}/\text{min}$	p_{zul}	N/mm^2	slide bearing	0,1
compressive strength (10000 h)	σ_M	MPa	Werksnorm	-	evolution of heat by $v=1\text{m}/\text{min}$		$^{\circ}\text{C}$		
compressive stress at break	σ_B	MPa	DIN EN ISO 604	k.Br.	evolution of heat by $v=10\text{m}/\text{min}$		$^{\circ}\text{C}$		
elastic compression limit	ε_{el}	%	internal Standard	4,5	evolution of heat by $v=100\text{m}/\text{min}$		$^{\circ}\text{C}$		
nominal compressive yield strain	ε_{cy}	%	DIN EN ISO 604	n.v.	evolution of heat by $v=200\text{m}/\text{min}$		$^{\circ}\text{C}$

thermal conductivity	λ	$\text{W}/(\text{m} \cdot \text{K})$	DIN 52612	-	free from silicone			✓	
thermal conductivity	c_p	$\text{kJ}/(\text{kg} \cdot \text{K})$	DSC		free from PTFE			✗	
fire behaviour (3,2mm) UL94									
oxygen index		%	LOI	DIN EN ISO 4589	sterilization				
All the tests are been made with a standard conditioning atmosphere of 23°C (at the moment no other temperature is available). The specified values are established from average values of several tests and they correspond to our today's knowledge. They are only to be used as information about our products and as help for the material selection. With these values, we do not ensure specific properties, or the suitability for certain application, therefore we do not assume any legal responsibility for an improper usage. The used test pieces have been machined from extruded semi-finished material. Since the plastics' properties depend on the manufacturing process (extrusion, injection moulding), on the dimensions of the semi finished material and on the degree of crystallinity, the actual properties of a specific product may slightly deviate from the tested ones. For information about divergent properties do not hesitate to contact us. On request we advise you regarding the most appropriate component design and the definition of material specifications more suitable to your application data. Notwithstanding, the customer bears all the responsibility for the thorough examination of suitability, efficiency, efficacy and safety of the chosen products in pharmaceutical applications, medical devices or other end uses.
